

USER MANUAL

DESCRIPTION

Congratulations! You have just purchased one of the finest boutique stompbox developed for guitar, bass, synthesiser & studio purposes. The Granny Pucker will give you:

- 1) dirty octave sounds (turn Mixer knob to the maximum)
- 2) weird distortions (turn the Mixer knob to the minimum)

This all in one little & beautiful box!

For „intended“ effects use a passive guitar or bass and put the Granny Pucker first in your signal chain (no buffers before it). Make sure to try different setups to see what you like best! It likes analog synths & piano, too!

OPERATING INSTRUCTIONS

Volume Control - sets the output level of the effect.

Mixer Control - mixes in the level of the octave down effect.

Puke Control - adjusts the amount of distortion.

Bypass Footswitch - Selects whether the Grannypucker is engaged or bypassed. The corresponding LED will be lit when the pedal is engaged, and dark when bypassed.

INPUT Jack - This 1/4" jack is the audio input to the Grannypucker.

OUTPUT Jack - This 1/4" jack is the audio output from the Grannypucker.

When the Grannypucker is in bypass mode, the OUTPUT jack is connected to the INPUT jack. So, this is a True Bypass pedal!

9Vdc Connector- for 9Vdc power supply same as used by Boss or a Truetone OneSpot... (9VDC)

This pedal doesn't work with battery!

WARRANTY INFORMATION

Our pedals are designed to survive. We offer limited warranty for 5 years on electronics and 2 months on footswitches and pots. Do not hesitate to contact us in the unlikely case your pedal stopped working! Visit bigjohnmusic.com
